

LTJNYC FINAL UPDATE

1. **The New Page:** We are adding a new page to be called home page.
(see attachment 1)

This page will be integrated to the LTJ app and it will work as follows:

- The LTJ public group activity will show all active public groups that are posting to timelines from left to right.
- LTJ public group feed: will show the last posting group from all groups from top to bottom as they post.
- When pressing trending categories it will work the same way trending categories works now with no changes.
- When pressing trending category it will show the results.
- Check LTJNYC: When pressing check LTJNYC it will land you on our original home page which we changed the name to LTJNYC search with no changes. (see attachment 2) The bottom menu will have the same icons as it is now except they will be the new icons designs and it will not be visible on default to view the bottom icon, you will need to press the arrow to open it.
- No other changes will be made to the above pages.
(See attachment 2)

The Login page: When a user logs in, it will land on the new page that we refer as Home page (See attachment 1)

IMPORTANT

When closing the app and opening it back, the app should bring you to the last page you were on if you stay logged in. When logging out and logging in, you will be landing on the home page. (Attachment 1)

When logging in with FaceBook it should take you immediately to the app Home Page not to the login page.

Splashscreen: Splash screen would be active only when signing in to the app for the first time and when logging out and logging in back.

Live function: The live function will allow the user/group creator to go live to his private and or public group. 

Share: We have discussed the option when pressing the share button from any app that LTJ will be one of the options to share. (See attachment 3) When choosing to share with LTJ, the user will have two choices to share. 1 as message, and 2 to group. which it would lead you to the messages page and two is to group which will lead you to my groups page. At that time, user can choose any group public or private and share them on timelines as a post.

The available button: We are experiencing problems with the available issue. If you look at the users, most of them are marked as unavailable. Everytime you log into the app, you need to mark yourself as unavailable and then available. We have discussed that all users by default will be available at all times. The only time that a user is not available is 1. When users turn the available button off and 2. If user entered available time to talk which will overwrite the available issue.

Bottom menus: all bottom menus will be hidden by default. They will only show when pressing the arrow to open them.

Skype issue: Needs to be addressed and corrected. 

Copy and Paste: We should allow to copy picture or video, a link and share it on LTJ and from LTJ.

We can limit the copy and paste from the following applications:

1. YouTube
2. FaceBook
3. Twitter
4. Google
5. Instagram
6. Whatsapp

If we need to.

Messages: We are integrating a check mark on the specific messages to be in Red when the message is unread and to be green when the message has been read.

My messages page will be the newly designed page. (See attachment 4) with the addition of number of messages. The bottom menu icons will not change. They will be the new icon design and visible when you open.

My contacts: my contact page will not change. Except for the icon new design. The bottom menu will not change except for moving my favorites icon to the left of the menu and then follow the other options. My phone book contact will look as the new design page. (See attachment 5)

Message history page: The page has a new design with 1 addition. A check mark next to the messages which will be green if the recipient reads the message  and it will be in Red when the recipient did not read the message. (See attachment 6)

My groups: My groups is a new design page. The bottom icons, will be reordered when from left to right.

- create a new group
- Post to group timeline
- Post to selected group
- Suspend group
- Delete group. (See attachment 7 and 8)

My Groups (NEW FUNCTION)

We have added an option for a user or a group creator to change the image of his or her group. (Attachment 8A)

My group timeline: Newly designed page, with additional two options on the drop menu. Bottom menu will stay the same as existing today except for the colors and the new designed icon. (See attachment 9)

My group timelines: newly designed page with menu drop down options (see attachment 10) and the go live button will only appear on groups created by you. (See attachment 11)

Side drop down menu: Newly designed side bar menu (See attachment 12)

At this time, I have no more ideas or any necessary changes. Please review the above and let me know of your inputs, availability of implementing them.
